

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 9 ln 29

Figure 5 shows susceptibility of human cell lines to SAW-CoV. (A) Amplification 3 0 of G3PDH, SARS-CoV gRNA and sgRNA at 1,24 and 48 h p.i.. Human embryonic kidney (HEK-293T) and human liver carcinoma cells (Huh-7). Mock inoculated cells were included as a negative control (M). Negative images are shown. This Figure is representative of three experiments performed in duplicate. (B) A comparison SAW-CoV virus titer between Vero E6 cells, Huh 7 cells, and HEK-293T cells a 1 hour, 24, hour, and 48 hours post-inoculation.
